International application No. PCT/DK 03/00475

None of the research documents discloses or suggest a method of establishing a PWM-modulated output signal representation by

- providing a stream of parallelly determined intersection representations on the basis of a stream of parallel reference signal representations into a stream of parallel reference signal representations and an input signal,

- establishing a serial PWM output signal representation by transforming said stream into a stream of serial intersection representations by means of a relative time shift of at least one said parallelly determined representations.

Such a method does also not appear obvious for the skilled man and the subject matter of claim 1 of the application appears to satisfy the requirements of Art. 33 PCT.

Dependent claims 2-16 refer to ways to carry out the method defined in claim 1 and also appear to satisfy Art. 33 PCT.
